# Allowable Subject Matter

1. Claims 31-35, 37-45, and 47-59 (renumbered 1-27, respectively) are allowed.

2. The following is an examiner's statement of reasons for allowance:

Regarding claim 31, Holma et al. ("WCDMA for UMTS" cited in Applicant's submitted IDS) (hereinafter "Holma") teaches the allocation (generation and configuring) of a radio network temporary identity (identifier) to a particular UE device by the RRC layer as spoken of on pages 140-141, section 7.7.3.4, paragraph 3.

Holma also teaches the including of the radio network temporary identity in the MAC header (header of MAC layer) of a data unit as spoken of on page 124, section 7.3.2., lines 13-17.

Holma also teaches the transmission of data units over FACH and/or DSCH channels as spoken of on page 76, section 6.2.2.2., page 77, section 6.2.2.6., and page 124, section 7.3.2., lines 13-17.

Takagi et al. (U.S. 6,965,580) (hereinafter "Takagi") teaches a radio communication system used for providing point-to-point and point-to-multipoint communication service, where "a first MAC identifier" is used for a "unicast service", and where "a second MAC identifier" is used for "a multicast service" as spoken of on column 2, lines 30-44.

However, Holma, Takagi, and the other prior art of record does not teach "generating an identifier for indicating the point-to-multipoint service, wherein the identifier is configured by a radio resource control (RRC) layer" as well as "adding the generated identifier to a data unit which is for the point-to-multipoint service in a medium

Art Unit: 2419

access control (MAC) layer, wherein the identifier is included in a header of the data unit" in combination with the other limitations of claim 31.

Regarding claims 32-35, 37-40, 52, 54, 56, and 57, these claims are further limiting to claim 31 and are thus also allowable over the prior art of record.

Regarding claim **41**, *Holma* teaches the allocation (generation and configuring) of a radio network temporary identity (identifier) to a particular UE device by the RRC layer as spoken of on pages 140-141, section 7.7.3.4, paragraph 3.

Holma also teaches the including of the radio network temporary identity in the MAC header (header of MAC layer) of a data unit as spoken of on page 124, section 7.3.2., lines 13-17.

Holma also teaches the transmission of data units over FACH and/or DSCH channels for reception by UE devices as spoken of on page 76, section 6.2.2.2., page 77, section 6.2.2.6., and page 124, section 7.3.2., lines 13-17.

Takagi teaches a radio communication system used for providing point-to-point and point-to-multipoint communication service, where "a first MAC identifier" is used for a "unicast service", and where "a second MAC identifier" is used for "a multicast service" as spoken of on column 2, lines 30-44.

However, Holma, Takagi, and the other prior art of record does not teach 
"receiving a data unit including an identifier which indicates the point-to-multipoint 
service via a Forward Access Channel (FACH) or a (Downlink Shared Channel) DSCH, 
wherein the identifier is included in a header of the data unit and the identifier was 
configured by a radio resource control (RRC) layer of a network" as well as "identifying

Art Unit: 2419

the data unit is for the point-to-multipoint service in <u>a medium access control (MAC)</u> layer using the identifier\* in combination with the other limitations of claim **41**.

Regarding claims 42-45, 47-51, 53, 55, 58, and 59, these claims are further limiting to claim 41 and are thus also allowable over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

## Response to Arguments

3. Applicant's arguments with respect to claims 31 and 41 provided in the interview conducted with Examiner on 2/13/09 have been fully considered and are persuasive. The previous rejections of claims 31 and 41 and their dependent claims have accordingly been withdrawn.

Specifically, the above teachings of *Holma* do not teach the generation/reception of an identifier that indicates <u>a particular point-to-multipoint service</u> that is configured by <u>an RRC layer</u> and added to <u>a header</u> of a data unit in <u>a MAC layer</u>, but rather teaches the generation of an identifier that indicates a particular user station.

Further, the above teachings of *Takagi* teach the generation of a media access control identifier corresponding to a multicast address or content name of a multicast information to be received by a group of radio terminals, but does not teach the generation/reception of an identifier that indicates a <u>particular point-to-multipoint service</u> that is configured by an RRC layer and added to a <u>header</u> of a data unit in a <u>MAC layer</u>.
